I'm a Data analyst who understands the role of data in solving business problems. I'm capable of identifying the root cause behind complex business problems and develop data driven solutions to address them. The solution is most of the times the recommendations that are to be given to the Business to overcome the situation, which I can communicate confidently.

TECHNICAL SKILLS

Languages : SQL, Python

Data Analysis : Data Cleaning, Exploratory Data Analysis, Statistical Analysis, Data Visualization, Business Analytics, Hypothesis Testing

Libraries : Pandas, Numpy, Seaborn, Matplotlib, SciPy

Databases : MySQL, PostgreSQL, MongoDB

Visualization : Tableau

Tools : Excel, Sheets, Git, Github, Jupyter Notebook, Google Colab

Business Acumen : Root Cause Analysis, Guesstimates, Metric Definition, Business Communication

PROJECTS

NimbusMart - E-Commerce Retailing Business | Python (pandas), Business Analytics

August 2026

- NimbusMart is a 2-year-old online retailer selling across Electronics, Home & Kitchen, Fashion, Beauty, Sports & Outdoors, and Books & Media. We grew steadily through 2024 and into early 2025 — but starting around Q3 2025, revenue has clearly softened, and even our Nov-Dec 2025 holiday season came in below last year's, which has never happened before.
- Communicated with the client to understand the metric and identified all the possible causes for the decline in the revenue.
- The metric was broken down in possible drivers with respect to the business and then each driver was examined on a higher level to identify the real culprit that was contributing most to the downward trend in the revenue.
- After investigating the causes like No. of customers, Average no. of orders per customer and Average value per order, the root cause was discovered to be the Customer Acquisition.
- The business was successfully retaining the customers which was understood with help of cohort analysis. But the customer acquisition was falling apart from the beginning of its second year.
- Recommended the business to understand the underlying root cause in the customer acquisition with help of the Marketing team.

TapEats - GMV Drop Analysis | Excel, Business Problem Solving

May 2026

- TapEats is an on-demand food delivery platform operating across 6 major cities (Mumbai, Delhi, Bangalore, Pune, Hyderabad, Chennai). The business launched just over 2 years ago and grew fast through 2024, including a strong festive season (Oct-Dec) that year. Since the mid of second year the GMV started to decline and business growth declined even in the festive season.
- Engaged with the business to understand the North Star Metric and then decomposed it in potential drivers, combination of which can be the cause of the problem. Investigated the drivers like No. of Active Customers, Customer Retention rate, Average no. of orders, Average delivery delay before and after the decline. 90% of the metrics were showing similar results but the driver in which there was a steep decline was Customer Acquisition.
- Since the beginning of the Second year the customer acquisition was 15% lower until the end of the year which was almost 77% lower compared to the previous festive season.
- The Business Was failing to acquire more customers and all of the channels decreased drastically. In order to increase the GMV the business tried to attract customers by giving discounts which could have resulted in the drop of GMV.
- Recommended the Business to discuss the issue with the marketing team and identify the performance in each channel in order to get more customers.

CERTIFICATES

EDA FUNDAMENTALS : Univariate, Bivariate and Multivariate Analysis, Statistical Analysis, Hypothesis Testing, Outlier Analysis, Segmentation

Scaler By InterviewBit

PYTHON LIBRARIES : Pandas, Numpy, Seaborn, Matplotlib, SciPy

Scaler By InterviewBit

SQL : SQL, MySQL, Big Query, MongoDB, PostgreSQL, RDBMS

Scaler By InterviewBit

Product Analytics : Business Acumen, Root Cause Analysis, Metric Definition

Scaler By InterviewBit

COURSES

Data Science And Machine Learning : Comprehensive training in Data Science and Machine Learning, covering Python, SQL, statistics, EDA, machine learning algorithms, and data visualization

Scaler By InterviewBit

EDUCATION

MASTERS IN TECHNOLOGY : Robotics And Artificial Intelligence

Sept 2024 - July 2026

JNTUHUCET, Sulthanpur

7.6 / 10

BACHELORS IN ENGINEERING : Mechanical Engineering

Sept 2019 - Oct 2023

Osmania University, Hyderabad

8.3 / 10
